SUMMARY

As a Web Developer, I strive to write beautiful and meaningful code that can impact the world for the better. I'm passionate in combining technology and creative thinking to create applications that harmonize the two.

I love dreaming up interesting ways to interact with the connected world we live in and think about how they can technologically be achieved. It's this power as a developer that drives me to keep learning.

PROJECTS

MENTORSHIP (www.mentorship-app.com)

Mentorship is a mobile-site application for professionals to connect and interact on a Mentor to Mentee basis. Using their Linked In profiles they can easily sign up and begin finding people of the opposite type to establish a relationship with. After seeing who they have most common interests with, they can request to connect. Once connected, they can now engage in a conversation via the messaging tool. (Ruby/Rails/JavaScript(jQuery)/PostgreSQL/LinkedIn API(OmniAuth)/Foundation, Heroku)

SNAPSHOT (<https://snapshot.herokuapp.com>)

SnapShort is a web application for people who like to share stories. A user can post a prompt, a few sentences that starts a storyline. Other users can then post their short-story that finishes the prompt. Users can then comment on both prompts and shorts as well as vote on the best response. It's an interactive space for writers to collaborate and write interesting short stories as a community. (Ruby/Sinatra/JavaScript(jQuery)/HTML/CSS, Heroku)

EMPLOYMENT
